

# -Undisclosed Restaurant, San Francisco, March 2016-

Quarry tile completely gone which caused saturated substrate

Subfloor and joist heavily damaged

All cleaned, repaired, now making new slope to drains

Grout washed out after years of intensive use & cleaning

After tile removal found more damage than hoped for...

Subfloor started with waterproofing cement around drains

# -Undisclosed Restaurant, San Francisco, March 2016-

Lots of screws to prevent 'flexing' of substrate

Joists repaired, completely re-sloped & two layers of new subfloor

1st water proof primer, 2nd flexible joint filler, 3rd flexible membrane. Then hand troweled sanitary cove base, raised 1/4"

Body coat with aggregate to ensure mechanical bonding of subsequent layer. Trowel install 1/4" cementitious urethane mixture

Five (!) applications installed, cove base sanded & ready for topcoat. Cementitious urethane dressing finishes this project.

Slight orange peel finish for ease of cleaning without slip & fall hazard. Coating goes up full 6" for seamless cove base integration

Started on Tuesday with equipment removal & demolition

Sunday afternoon transformation completed
